

POSTUPAK RECENZIRANJA

Ukoliko članak nije uređen prema uputama, urednici će vratiti rad da se koriguje.

Svi prihvaćeni članci prolaze kroz proces dvostruke, anonimne recenzije. Recenzenti će dati preporuke za rad u vidu: rad se može objaviti bez ispravki; rad se može objaviti uz navedene ispravke; rad se može objaviti uz navedene ispravke i ponovni postupak recenziranja; rad se ne može objaviti. Ako recenzenti ocijene negativno rad, rad se odbija. Ako recenzenti različito ocijene rad, onda urednici odlučuju o prihvatanju/neprihvatanju rada.

Recenzenti će u obrascima za recenzente navesti i kategorizaciju rada (naučni, stručni ili pregledni rad). Ukoliko recenzenti različito kategoriziraju rad, onda se u postupak recenziranja uključuje i treći recenzent.

REVIEW PROCEDURE

If the article is not edited according to the instructions, the editors will return it for corrections.

All accepted articles go through a double, anonymous review process. The reviewers will give recommendations for the paper in the following forms: the paper can be published without corrections; the paper may be published with the specified corrections; the paper can be published with the specified corrections and a new review process; the paper cannot be published. If the reviewers rate the paper negatively, the paper is rejected. If the reviewers evaluate the paper differently, then the editors decide on the acceptance/rejection of the paper.

The reviewers will indicate the categorization of the paper (scientific, professional, or review paper) within the reviewer's form. If the reviewers categorize the work differently, then a third reviewer is included in the review process.
